

Weekly Update Covid-19 in Jakarta

18 - 24 July 2021

#jakartatanggapcorona

This Week Highlights

Increase in daily positive cases and spread of Covid-19's Delta variant have been responded by implementing **Emergency PPKM policy**

Daily isolation bed occupancy rate reaches 76% and ICU bed occupancy rate reaches **89%**

Positivity Rate has decreased in the last week from **38,8%** into **25,7%**

First dose vaccination in Jakarta has reached **79.2%** of target and **second dose** vaccination has reached **24.9%** of target

Since implementing PPKM, **recovery rate has increased from 84.5% (July 2) to 89.3% (July 24)**

Covid-19 death rate in Jakarta is at 1.4%

Family cluster should be wary of due to inappropriate 5M health protocol implementation

5M should be carried out properly and vaccination should be done as soon as possible

Looking at the released data related to community mobility by Google (Covid-19 Community Mobility Report*) and compare it with daily positive case trend, it shows that daily positive case trend is directly proportional to community mobility trend. It means suppressing community mobility can help reduce increase in daily positive cases. However, this condition cannot be directly interpreted as a decrease in transmission cases. Therefore, all elements must work together to always implement 5M properly, intensify 3T, and get vaccinated immediately.

For further information about Covid-19 Community Mobility Report, please access: <https://www.google.com/covid19/mobility/>

Funeral for Public and Funeral with Covid-19 Handling Procedures

Until July 24, total funeral reported with Covid-19 handling procedures is 29,138 cases, while funeral for public is 89,076 cases. The highest reporting case for funeral with Covid-19 handling procedures is recorded on July 10, 2021 with 407 cases.

Disclaimer: Funeral with Covid-19 handling procedures is including funeral for people suspected Covid-19 but haven't received PCR test results yet, thus the number may differ from number of people who died from Covid-19.

COVID-19 VACCINATION IN JAKARTA

The higher Covid-19 transmission rate means vaccination is absolutely necessary. Vaccine can protect us by creating antibody or immune system. With antibody, our body has been trained to prevent from being exposed to Covid-19. Vaccination cannot cure Covid-19 completely. But, according to experts, although infected by Covid-19 after being vaccinated, the vaccine will protect the body from severe and deadly symptoms. It can also become a weapon to fight the pandemic by building herd immunity or population immunity if more than 70% population have been vaccinated. Get vaccinated immediately at the nearest vaccination site!

How to Get Vaccines in Jakarta

Requirements for vaccination:

- Bring original ID card (KTP) to the vaccination site;
- Bring copy of family card (KK) for those who don't have KTP
- Vaccination receivers who register via JAKI or corona.jakarta.go.id website should show their printed pre-screening results as a proof of registration

Vaccination Sites in Jakarta

- Vaccination Centers

- Health Centers

- Hospitals

- Mobile Vaccination

Updated schedules and locations can be accessed on vaccination quota page at

JAKI : <https://corona.jakarta.go.id/id/kuota-vaksinasi-jaki>

Social Media
Jakarta Smart City : <https://www.instagram.com/jsclab/>

How to Register for Vaccination via JAKI

Open JAKI application

Choose Covid-19 vaccination option

Fill the form

How to Get Second Dose Vaccines

1. Download JAKI at Google Play Store or App Store
2. Open JAKI application
3. Choose Covid-19 Vaccination Registration option
4. Enter your NIK and full name. Then click check.

Vaccination Developments

Data 24 July 2021

Covid-19 Vaccination in Jakarta

Dose 1 Vaccination Program	Dose 2 Vaccination Program
6.982.429	2.191.407
Percentage of Dose 1 Vaccination Program 79,2%	Percentage of Dose 2 Vaccination Program 24,9%
Today's Dose 1 Vaccination Recipients 112.132 Vaccine proportion in Jakarta: 14%	Today's Dose 2 Vaccination Recipients 67.358 Vaccine proportion in Jakarta: 19%

Vaccination Achievement for Residents Aged 12-17 Years

Dose 1: 42,8%
Dose 2: 0,0%

Vaccination Achievement for Residents Aged 18-59 Years

Dose 1: 75,0%

LATES CONDITION OF COVID-19 IN CITY MUNICIPALITIES/REGENCY

*data on July 24, 2021

Active Cases:
Number of people who are treated + people who are undergoing self-isolation

West Jakarta

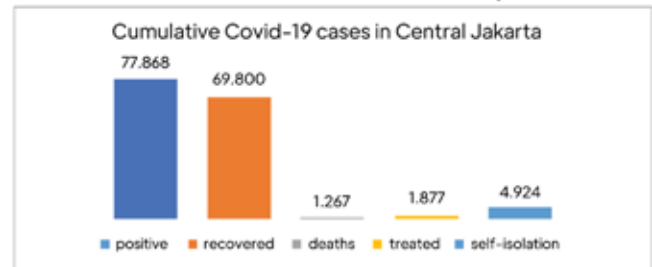

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 137,159 cases
- Accumulation of recovered population reaches 123,172 people (89.8%). Total active cases of 11,888 (8.7%)
- Highest percentage of active cases is in **Kembangan Sub-district (9.9%)**

Central Jakarta

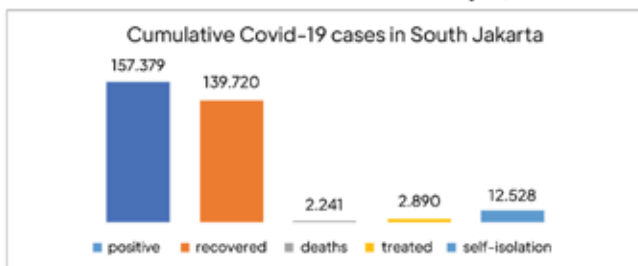

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 77,868 cases
- Accumulation of recovered population reaches 69,800 people (89.6%)
- Total active cases of 6,801 (8.7%)
- Highest percentage of active cases is in **Cempaka Putih Sub-district (10.3%)**

South Jakarta

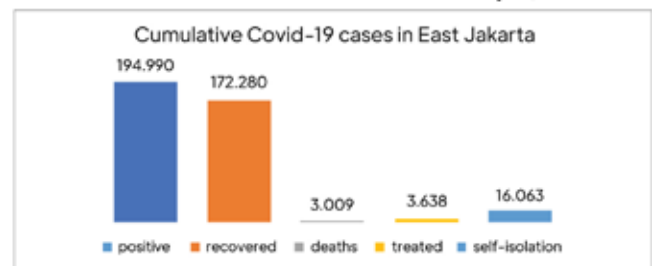

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 157,379 cases
- Accumulation of recovered population reaches 139,720 people (88.8%)
- Total active cases of 15,418 (9.8%)
- Highest percentage of active cases is in **Jagakarsa Sub-district (10.9%)**

East Jakarta

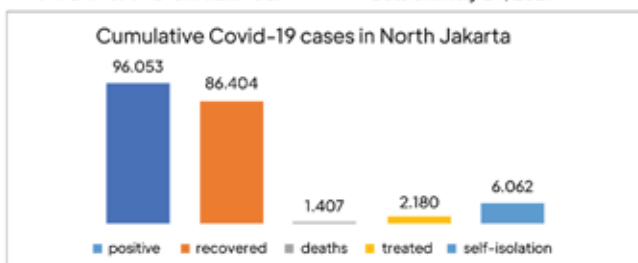

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 194,990 cases
- Accumulation of recovered population reaches 172,280 people (88.4%)
- Total active cases of 19,701 (10.1%)
- Highest percentage of active cases is in **Cipayung Sub-district (11.4%)**

North Jakarta

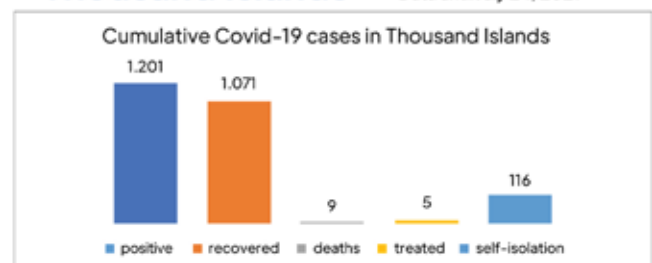

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 96,053 cases
- Accumulation of recovered population reaches 86,404 people (90.0%)
- Total active cases of 8,242 (8.6%)
- Highest percentage of active cases is in **Cilincing Sub-district (9.6%)**

Thousand Islands

*Data until July 24, 2021

- Accumulation of Covid-19 cases: 1,201 cases
- Accumulation of recovered population reaches 1,071 people (89.2%)
- Total active cases of 121 (10.1%)
- Highest percentage of active cases is in **South Thousand Islands Sub-district (10.8%)**

For latest Covid cases can be seen on the website <https://corona.jakarta.go.id/id/peta-persebaran>

Self-Isolation Guidelines

Positive Covid-19 cases relatively still high, but not everyone needs to be hospitalized

if you are confirmed positive for COVID-19 with no symptoms or mild symptoms, check out the following infographic as a guide for self-isolation at home or centralized isolation location.

Covid-19 Patients Symptoms Classification

Patient Category	Patient's Condition	Isolation Location
Suspects and Close Contacts	Without symptoms	At Home (has meet the requirements for isolation)
People with No Symptoms	Oxygen saturation \geq 95%, respiratory rate 12-16 breaths per minute, With/without comorbidity	At Home (has meet the requirements for isolation)
Mild Symptoms	Oxygen saturation 94%, respiratory rate <24 breaths per minute, With/without comorbidity	At Home (patients with comorbidity need close monitoring)
Moderate Symptoms	Oxygen saturation 90-93%, respiratory rate 24-30 breaths per minute	Wisma Atlet
Severe Symptoms	Oxygen saturation \leq 90%, respiratory rate 30 breaths per minute	Need to be treated immediately at Hospital

Treatment for Covid-19 Patients Without Symptoms

Covid-19 patients without symptoms must report to local health center to get explanation about self-isolation and its procedures, as well as to report to Covid-19 Task Force at local RT/RW to get isolation assistance.

Central Government Isolation Locations

Regional Government Isolation Locations

House for Self Isolation/ Private Facilities

Special Isolation Locations Provided by Private Sector, Legal Entity, and Others

CONTROLLED ISOLATION LOCATION
(Kepgub No. 891 Tahun 2021)

Requirements (According to Kepgub No. 980/2020) and Self-Isolation Activity

Download Self-Isolation Guidelines for Adult Patients

Download Self-Isolation Guidelines for Pediatric Patients

Close Contacts with Covid-19 Patients

Close contacts are people who have in contact with someone who has already confirmed positive for Covid-19 by:

- Having face-to-face contact for at least 15 minutes within 1 meter distance.
- Direct physical contact (shaking hands, holding hands, and others)
- Sharing utensils
- Sneezing and coughing that cause the droplets to enter respiratory tract
- In symptomatic cases, in order to find close contacts, the contact period is calculated from 2 days before the symptom is developed and up to 14 days after the symptom developed
- Everyone who have close contact with people with Covid-19 should quarantine themselves at least 14 days after having close contact and take PCR or antigen test if there are symptoms

For information and assistance regarding Covid-19 in Jakarta, please contact **112 / 0813 8837 6955**
If patients have symptoms, please contact local health center with contact list on page 6.

PCR and Antigen Swab Testing for Close Contacts

Those who have been in close contact with Covid-19 patients, can immediately report to the nearest sub-district Community Health Center (Puskesmas). If symptoms are detected, you can participate in free swabs available at your respective domicile.

Dissemination of Information and news on social media regarding medicines given to Covid-19 patients may cause side effects. Medicine administration to Covid-19 patients must be under close medical supervision by doctors and health workers. Jakarta Health Agency (Dinkes) provides online consultation (telemedicine) services and medicine packages to patients who are undergoing a self-isolation based on the symptoms experienced. The following medicine packages are given by the agency:

Service for Vitamins and Self-isolation Medication Needs

Jakarta Medicine Packages

Patient with No Symptoms

Report to the nearest Puskesmas

Medicine Pack 1
 a. Vitamin C 2x500 mg/ 14 hari
 b. Vitamin D 400-1000 IU/ hari
 c. Multi vitamin C, B, E, zinc

Patients with Mild Symptoms

Report to the nearest Puskesmas

Medicine Pack 2
 a. Medicine Pack 1
 b. - Azitromisin 1x500 mg/hari, selama 5 hari
 - Favipiravir loading dose 2x1600mg
 - 2x600mg hari 2-5 (40 butir atau Oseltamivir (Tamiflu) 2x75mg selama 5-7 hari
 c. Symptomatic medication such as paracetamol for fever

Telemedicine Packages

PCR test/antigen swab test in a lab affiliated with the Ministry of Health

The ministry cooperates with the SiCepat delivery service to pick up medicines/vitamins from Kimia Farma pharmacies and deliver them to patients' homes

No Symptoms
 Multivitamin: C, D, E, Zinc

Mild Symptoms
 a. Multivitamin: C, D, E, Zinc
 b. Azitromisin 500mg
 c. Oseltamivir 75mg
 d. Parasetamol tab 500mg

Vitamin and Medicine Packages for Self-isolation Needs

Jakarta Package

Vitamin C (500 mg)	Oseltamivir (2x75mg)
Vitamin D (400 IU-1000 IU)	Favipiravir (2x1600 mg)

Telemedicine Package

Multivitamin: C,D, E, ZINC
Azitromisin (500 mg)
Oseltamivir (75 mg)
Parasetamol tab (500 mg)

Army Package

Vitamin C (500 mg)	Azitromisin (500 mg)
Vitamin D (1000 IU)	Oseltamivir (75 mg)
ZINC (20 mg)	Parasetamol (500 mg)
Ivermectin (12 mg)	Ambroxol tab

Post-administration Services and Self-isolation Referrals

Administration of Completed Self-isolation

Patients who have undergone isolation for 10-13 days and is no longer showing symptoms will get a Certificate of Completed Isolation.

- Isolation Completion Certificate is issued by a health facility/isolation location that monitors during isolation.
- Patients who self-isolation with the recommendation of private health facilities but without monitoring, they can report swab results to the Puskesmas.

Administration requirements for referral to an Isolation location

1. Puskesmas referral letter
2. Laboratory results (PCR) positive
3. Personal Identity/ID card/certificate from RT/RW/urban village

- Puskesmas conducts online monitoring and not authorized to issue a certificate for patients who do not report.

For information and assistance regarding Covid-19 in Jakarta, please contact **112 / 0813 8837 6955**
 If patients have symptoms, please contact local health center with contact list on page 6.

Whatsapp Contact Services for Puskesmas in Jakarta

The following is a list of hotline numbers in 6 regions, which have information services about PCR and antigen swab testing, vitamin and medicine for self-isolation needs, administration services for referral letters to isolation locations, until administrative services for self-isolation completion.

0895 4330 04000
0857 1442 8739

Demand for convalescent plasma is growing. Convalescent plasma from patients who have already recovered from Covid-19 may contain antibodies against the virus. Giving the convalescent plasma to people currently fighting Covid-19 may help them recover. Either donors or patients who need donors can contact Jakarta's Indonesian Red Cross (PMI) service contact as follows:

Convalescent Plasma Donor

People who have recovered from Covid-19 for at least three months are urged to consider donating plasma, which may help save the lives of other patients. Donor eligibility in general:

- Plasma donors should be at least 17 - 60 years old
- Fully recovered from COVID-19 for at least three months
- Healthy and non-reactive for transmissible viruses including hepatitis, HIV, etc
- Have a complete resolution of Covid- 19 symptoms (fever/cough/shortness of breath/diarrhea) for at least 14 days to three months prior to donation.
- Recommended for men, as well as women who have not
- pregnant
- Plasma donors should counterbalance at least
- kilograms
- Willing to sign the Donor Consent Form

For information about convalescent plasma, please contact:

Halo Donor Jakarta : 0856 8864 678

Website : <https://plasmakonvalesen.jakarta.go.id>

How to get Convalescent Donor

To get a convalescent donor, you need to request convalescent plasma through the hospital to Jakarta PMI by sending the request form.

For further information on convalescent plasma requests, please call

COVID-19 NEWS AND HOAX

As many as 1,007,379 beneficiary families (KPM) have received Government's social cash transfers (BST) Phases 5 and 6 (May and June 2021) through Bank DKI accounts. It does not include recipients Social Assistance for the Keluarga Harapan Program (PKH) nor Non-Cash Food Assistance (BPNT). Always obey health protocols when making cash withdrawals at Bank DKI ATMs.

Jakarta Provincial Government's Social Cash Transfer (BST)

Central Government

- Assistance comes from the State Budget (APBN) funds
- Distributed by the Ministry of Social Affairs through PT Pos Indonesia (Persero)

Jakarta Provincial Government

- Assistance comes from the Jakarta Regional Budget (APBD) funds
- Distributed through Bank DKI account by Rp 300,000/month
- BST for the 5th and 6th Phase (May and June 2021) will be transferred in July 2021
- Distributed in the form of Bank DKI Savings Cards and ATM Cards

Disbursement Mechanism

Jakarta Provincial Government Social Cash Transfer (BST)

- ✓ Registered as recipients of social basic food assistance in 2020 as a result of updating and matching data from the Jakarta Provincial Disdukcapil (Jakarta Population and Civil Registration Dept.)
- ✓ Exclude recipients of Social Assistance for the Keluarga Harapan Program (PKH) nor Non-Cash Food Assistance (BPNT)
- ✓ The aid will be transferred directly to the recipient's bank account in the 3rd week of July
- ✓ BST Phases 5 and 6 are given in July 2021 with a value of Rp300,000/month or Rp600,000/family in total
- ✓ BST funds can be withdrawn in cash through ATMs and can be spent to meet basic needs

Hoax Updates

Since the beginning of the COVID-19 outbreak, an 'infodemic' of false and misleading information has spread alongside the disease. It leads to an overabundance of information, which can certainly hinder the search for a solution.

RAPID ANTIGEN TEST KIT SHOWS A POSITIVE RESULT FOR COVID-19 WHEN GIVEN TAP WATER

The information from a video that indicates rapid antigen kit showing a positive result for Covid-19 when given tap water, is a hoax. In fact, rapid antigen test kits are very sensitive to acidity (pH). Its use must be in accordance with the instructions for valid results.
